

# TRUCKEE RIVER DEMO — NIGHT ATTACK LIST

Lean reusable Nuxt 4 + Vuetify 4 rafting platform blueprint

---

## 1. ENVIRONMENT + SANITY CHECK

- Pull latest repo + verify clean git state before touching structure.
- Confirm Nuxt 4 boots locally with zero fatal errors.
- Confirm Vercel environment variables exist (Resend, Stripe, etc.).
- Create /docs folder if not already present.
- Snapshot current Lighthouse scores before edits.
- Create tonight branch: feature/night-attack-01.

## 2. PROJECT STRUCTURE CLEANUP

- Remove dead demo components/pages/plugins.
- Standardize folders: /pages /components /layouts /content /server /composables.
- Add shared app config file for business identity.
- Separate rafting-specific content from reusable agency logic.
- Create reusable CTA component shell.
- Create reusable Hero component shell.
- Add placeholder image structure for optimized assets.

## 3. CORE PAGE PASS

- Home page: emotional hero + primary CTA + trust section.
- Trip page: Boca run info, duration, pricing, FAQs.
- About page: guide/company story.
- Contact page: clean form + resend integration.
- Preparation page: what to bring / expectations / weather.
- Booking page placeholder linked to Singenuity.
- Footer includes safety + phone + location + hours.

## 4. COMPONENT SYSTEM

- Hero component with slots + image overlay.
- Reusable CTA banner component.
- FAQ accordion component.
- Testimonial card component.
- Pricing card component.
- SEO text block component.
- Gallery grid component using optimized webp.

## 5. SEO + PERFORMANCE

- Add title/meta/OG image to every page.
- Compress hero images to webp before usage.
- Lazy-load noncritical images.
- Verify semantic heading structure (1 H1 only).
- Ensure mobile nav works cleanly.
- Run Lighthouse after each major section.
- Target: Performance 90+, SEO 95+, Accessibility 90+.

## 6. CONTENT + STORYTELLING

- Replace generic filler copy with real Truckee/Tahoe energy.
- Use short sections instead of walls of text.
- Add safety reassurance without sounding corporate.
- Make CTA copy action-oriented.
- Build rhythm: emotion → info → trust → booking.
- Add visual spacing aggressively.

## 7. DEV DISCIPLINE

- Commit after each meaningful completed section.
- Name commits clearly.
- Test mobile constantly during build.
- Avoid overengineering tonight.
- Build reusable systems first, polish second.
- If stuck >15 min: simplify.

## 8. FINAL NIGHT WRAP

- Push branch.

- Deploy preview to Vercel.
- Capture screenshots of each page.
- Export Lighthouse reports.
- Write tomorrow's first three priorities before stopping.
- DO NOT start new systems after momentum drops.

## **RULES OF THUMB**

- Fast beats perfect tonight.
- Every component should be reusable.
- Every page should have one primary goal.
- Visual hierarchy matters more than fancy effects.
- Strong spacing = perceived quality.
- Keep future agency template potential in mind.
